

boost::statechart::  
event< EvWaypoint191  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint191< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint191["cl_move_base_z::EvWaypoint191< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint191 --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint191 < TSource, TOrthogonal > >`, is shown in a white box with a black border. It has two empty compartments below its name. The derived class, `cl_move_base_z::EvWaypoint191 < TSource, TOrthogonal >`, is shown in a grey box with a black border. It has a compartment for its name and two additional compartments below it, one of which contains the attribute `+ waypointIndex`. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

cl\_move\_base\_z::EvWaypoint191  
< TSource, TOrthogonal >

+ waypointIndex
