

boost::statechart::  
event< EvWaypoint219  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint219< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint219< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a base class box with a light yellow background and a derived class box with a light gray background. The base class box is divided into three horizontal sections: the top section contains the class name, the middle section is empty, and the bottom section is empty. The derived class box is divided into three horizontal sections: the top section contains the class name, the middle section contains the member variable '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangular head points from the top section of the derived class box to the bottom section of the base class box, indicating inheritance.

cl\_move\_base\_z::EvWaypoint219  
< TSource, TOrthogonal >

+ waypointIndex
