

boost::statechart::
event< EvWaypoint224
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint224< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint224< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvWaypoint224 < TSource, TOrthogonal > >`, is represented by a white box with a black border and is divided into three horizontal sections. The first section contains the class name, while the other two are empty. The derived class, `cl_move_base_z::EvWaypoint224 < TSource, TOrthogonal >`, is represented by a gray box with a black border and is also divided into three horizontal sections. The first section contains the class name, the second section contains the public attribute `+ waypointIndex`, and the third section is empty. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint224
< TSource, TOrthogonal >

+ waypointIndex
