

boost::statechart::  
event< EvWaypoint178  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint178 < TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint178["cl_move_base_z::EvWaypoint178 < TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint178 --|> boost_statechart_event
```

The diagram shows a class hierarchy. The base class is `boost::statechart::event< EvWaypoint178 < TSource, TOrthogonal > >`, which is represented by a white box with a black border. It has two empty rectangular compartments below the name. The derived class is `cl_move_base_z::EvWaypoint178 < TSource, TOrthogonal >`, represented by a gray box with a black border. It has two compartments: the top one contains the public member `+ waypointIndex`, and the bottom one is empty. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

cl\_move\_base\_z::EvWaypoint178  
< TSource, TOrthogonal >

+ waypointIndex
