

boost::statechart::  
event< EvWaypoint93  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint93< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint93< TSource, TOrthogonal >"]
    Derived --|> Base
    Derived + waypointIndex
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint93 < TSource, TOrthogonal > >`, is shown in a white box with three empty compartments. The derived class, `cl_move_base_z::EvWaypoint93 < TSource, TOrthogonal >`, is shown in a grey box with two compartments: the first contains the public member `+ waypointIndex`, and the second is empty. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.

cl\_move\_base\_z::EvWaypoint93  
< TSource, TOrthogonal >

+ waypointIndex
