

```
boost::statechart::  
event< EvWaypoint7<  
    TSource, TOrthogonal > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint7< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint7["cl_move_base_z::EvWaypoint7< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint7 --|> boost_statechart_event
```

The diagram shows a base class at the top and a derived class at the bottom. The base class is defined by the first block and has two empty sections below its name. The derived class is defined by the second block and has two sections below its name, one containing a public member variable. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.

```
cl_move_base_z::EvWaypoint7  
    < TSource, TOrthogonal >
```

```
+ waypointIndex
```
