

boost::statechart::  
event< EvWaypoint208  
< TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvWaypoint208< TSource, TOrthogonal > >"]
    class cl_move_base_z_EvWaypoint208["cl_move_base_z::EvWaypoint208< TSource, TOrthogonal >"]
    cl_move_base_z_EvWaypoint208 --|> boost_statechart_event
```

The diagram shows a class hierarchy. The base class, `boost::statechart::event< EvWaypoint208 < TSource, TOrthogonal > >`, is represented by a white box with a black border and is divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section is empty. The derived class, `cl_move_base_z::EvWaypoint208 < TSource, TOrthogonal >`, is represented by a gray box with a black border and is also divided into three horizontal sections. The top section contains the class name, the middle section contains the public attribute `+ waypointIndex`, and the bottom section is empty. A blue arrow with a hollow triangular head points from the top section of the derived class to the bottom section of the base class, indicating inheritance.

cl\_move\_base\_z::EvWaypoint208  
< TSource, TOrthogonal >

+ waypointIndex
