

boost::statechart::
event< EvWaypoint108
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint108< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint108< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. A blue arrow with an open triangular head points from the bottom class to the top class. The top class is a template for statechart events, while the bottom class is a concrete implementation that adds a public member variable.

cl_move_base_z::EvWaypoint108
< TSource, TOrthogonal >

+ waypointIndex
