The diagram shows a class hierarchy. The base class is `boost::statechart::event< EvWaypoint209 < TSource, TOrthogonal > >`. It has two empty compartments below the name. The derived class is `cl_move_base_z::EvWaypoint209 < TSource, TOrthogonal >`. It has a compartment for the name, a compartment for the public member `+ waypointIndex`, and an empty compartment at the bottom. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.
