

boost::statechart::  
event< EvWaypoint191  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint191< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint191< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint191< TSource, TOrthogonal > >`, is shown in a white box with a black border. It has two empty rectangular compartments below its name. The derived class, `cl_move_base_z::EvWaypoint191< TSource, TOrthogonal >`, is shown in a grey box with a black border. It has a compartment containing the public member `+ waypointIndex` below its name. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating that `cl_move_base_z::EvWaypoint191` inherits from `boost::statechart::event`.

cl\_move\_base\_z::EvWaypoint191  
< TSource, TOrthogonal >

+ waypointIndex
