The diagram shows a class hierarchy. The base class is `boost::statechart::event< EvWaypoint254 < TSource, TOrthogonal > >`. It has two empty compartments below the name. The derived class is `cl_move_base_z::EvWaypoint254 < TSource, TOrthogonal >`. It has a public attribute `+ waypointIndex` in its second compartment and an empty third compartment. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.
