

boost::statechart::  
event< EvWaypoint98  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint98< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint98< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a vertical inheritance relationship. The top class is 'boost::statechart::event< EvWaypoint98 < TSource, TOrthogonal > >'. The bottom class is 'cl\_move\_base\_z::EvWaypoint98 < TSource, TOrthogonal >' and it has a public attribute '+ waypointIndex'. A blue arrow with an open triangle head points from the bottom class to the top class, indicating inheritance.

cl\_move\_base\_z::EvWaypoint98  
< TSource, TOrthogonal >

+ waypointIndex
