The diagram illustrates a class hierarchy. At the top is the base class 'TCbRelativeMotion', represented by a rectangle divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. Below this is the derived class 'cl_nav2z::CbRetry<TCbRelativeMotion>', also a rectangle divided into three sections. The top section contains the class name, the middle section contains the private attribute '- odomTracker_', and the bottom section contains the public methods '+ CbRetry()' and '+ onEntry()'. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.
