

```
boost::statechart::  
event< EvTrue< TSource,  
        TState > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvTrue< TSource, TState > >"]
    class smacc2_event_generators["smacc2::event_generators< EvTrue< TSource, TState > >"]
    boost_statechart_event <|-- smacc2_event_generators
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvTrue< TSource, TState > >`, is represented by a white box with a black border. It has three horizontal compartments: the top one contains the class name, and the two below it are empty. The derived class, `smacc2::event_generators< EvTrue< TSource, TState > >`, is represented by a gray box with a black border, also with three horizontal compartments. The top compartment contains the class name, while the others are empty. A blue arrow with an open triangular head points from the top of the derived class box to the bottom of the base class box, indicating that `smacc2::event_generators` inherits from `boost::statechart::event`.

```
smacc2::event_generators  
::EvTrue< TSource, TState >
```
