

```
{boost::statechart::  
event< EvTimer< TSource,  
      TOrthogonal > >  
      ||}
```

The diagram illustrates an inheritance relationship between two C++ classes. At the top is a white box containing the definition of `boost::statechart::event< EvTimer< TSource, TOrthogonal > >`. At the bottom is a gray box containing the definition of `cl_ros_timer::EvTimer< TSource, TOrthogonal >`. Two blue arrows point from the gray box up to the white box, indicating that `cl_ros_timer::EvTimer` inherits from `boost::statechart::event`.

```
{cl_ros_timer::EvTimer  
< TSource, TOrthogonal >  
      ||}
```
