

```
boost::statechart::  
event< EvWaypoint8<  
    TSource, TOrthogonal > >
```

The diagram shows two classes. The top class is `boost::statechart::event< EvWaypoint8< TSource, TOrthogonal > >` and the bottom class is `cl_move_base_z::EvWaypoint8< TSource, TOrthogonal >`. A blue arrow points from the bottom class to the top class, indicating inheritance.

```
cl_move_base_z::EvWaypoint8  
    < TSource, TOrthogonal >
```

```
+ waypointIndex
```
