

cl_move_group_interface
::CbMoveKnownState::onEntry

```
graph LR; A[cl_move_group_interface::CbMoveKnownState::onEntry] --> B[cl_move_group_interface::CbMoveKnownState::loadJointStatesFromFile];
```

The diagram consists of two rectangular boxes connected by a blue arrow pointing from left to right. The left box is white with a black border and contains the text 'cl_move_group_interface' followed by '::CbMoveKnownState::onEntry' on the next line. The right box is gray with a black border and contains the text 'cl_move_group_interface' followed by '::CbMoveKnownState::loadJointStatesFromFile' on the next line. The arrow is a solid blue line with a triangular arrowhead pointing towards the right box.
