

```
boost::statechart::  
event< EventC< TSource,  
        TState > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EventC< TSource, TState > >"]
    class smacc2_state_reactors_eventc["smacc2::state_reactors::EventC< TSource, TState >"]
    smacc2_state_reactors_eventc --|> boost_statechart_event
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EventC< TSource, TState > >`, is represented by a white box with a black border. The derived class, `smacc2::state_reactors::EventC< TSource, TState >`, is represented by a gray box with a black border. A blue arrow with an open triangular head points from the derived class to the base class, indicating that `EventC` inherits from `event`.

```
smacc2::state_reactors  
::EventC< TSource, TState >
```
