

```
boost::statechart::  
event< EvTransitionConfigure  
< TSourceObject, TOrthogonal > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvTransitionConfigure< TSourceObject, TOrthogonal > >"]
    class cl_lifecyclenode_evtransition_configure["cl_lifecyclenode::EvTransitionConfigure< TSourceObject, TOrthogonal >"]
    boost_statechart_event <|-- cl_lifecyclenode_evtransition_configure
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, located at the top, is `boost::statechart::event< EvTransitionConfigure< TSourceObject, TOrthogonal > >`. It is represented by a white rectangular box with a black border and is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. The derived class, located at the bottom, is `cl_lifecyclenode::EvTransitionConfigure< TSourceObject, TOrthogonal >`. It is represented by a gray rectangular box with a black border and is also divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating the direction of inheritance.

```
cl_lifecyclenode::EvTransition  
Configure< TSourceObject,  
          TOrthogonal >
```
