

```
boost::statechart::  
event< EvWaypoint5<  
    TSource, TOrthogonal > >
```

The diagram shows two class boxes. The top box is for `boost::statechart::event< EvWaypoint5< TSource, TOrthogonal > >` and has three empty compartments. The bottom box is for `cl_move_base_z::EvWaypoint5< TSource, TOrthogonal >` and has three compartments: the first contains the class name, the second contains the member `+ waypointIndex`, and the third is empty. A blue arrow points from the bottom box to the top box, indicating inheritance.

```
cl_move_base_z::EvWaypoint5  
    < TSource, TOrthogonal >
```

```
+ waypointIndex
```
