

```
boost::statechart::  
event< EvCbSuccess<  
  AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ event types. At the bottom is a grey box representing the base class, `smacc2::EvCbSuccess`, which is specialized with `AsyncCB` and `Orthogonal`. A blue arrow points upwards from this box to a white box above it, representing the derived class, `boost::statechart::event`, which is also specialized with `AsyncCB` and `Orthogonal`. Both boxes are divided into three horizontal sections, with the top section containing the code and the other two sections being empty.

```
smacc2::EvCbSuccess  
< AsyncCB, Orthogonal >
```
