

boost::statechart::
event< EvWaypoint224
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint224< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint224< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a class hierarchy. The base class, 'boost::statechart::event< EvWaypoint224 < TSource, TOrthogonal > >', is represented by a white box with a black border and is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. The derived class, 'cl_move_base_z::EvWaypoint224 < TSource, TOrthogonal >', is represented by a grey box with a black border and is also divided into three horizontal sections. The top section contains the class name, the middle section contains the public attribute '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating inheritance.

cl_move_base_z::EvWaypoint224
< TSource, TOrthogonal >

+ waypointIndex
