

```
boost::statechart::  
event< EvTransitionConfigure  
< TSourceObject, TOrthogonal > >
```

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvTransitionConfigure< TSourceObject, TOrthogonal > >"]
    class cl_lifecyclenode_evtransition_configure["cl_lifecyclenode::EvTransitionConfigure< TSourceObject, TOrthogonal >"]
    boost_statechart_event <|-- cl_lifecyclenode_evtransition_configure
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, located at the top, is `boost::statechart::event< EvTransitionConfigure< TSourceObject, TOrthogonal > >`. It is represented by a white rectangular box with a black border, divided into three horizontal sections. The first section contains the class name, while the second and third sections are empty. The derived class, located at the bottom, is `cl_lifecyclenode::EvTransitionConfigure< TSourceObject, TOrthogonal >`. It is represented by a gray rectangular box with a black border, also divided into three horizontal sections. The first section contains the class name, while the second and third sections are empty. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating the direction of inheritance.

```
cl_lifecyclenode::EvTransition  
Configure< TSourceObject,  
          TOrthogonal >
```
