

boost::statechart::  
event< EvWaypoint106  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint106< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint106< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram illustrates an inheritance relationship. The base class, `boost::statechart::event< EvWaypoint106 < TSource, TOrthogonal > >`, is represented by a white box with a black border. It contains the event signature in its top section and has two empty sections below. The derived class, `cl_move_base_z::EvWaypoint106 < TSource, TOrthogonal >`, is represented by a grey box with a black border. It contains the event signature in its top section, the public member `+ waypointIndex` in its middle section, and an empty section at the bottom. A blue arrow with an open triangular head points from the derived class box to the base class box, indicating that `cl_move_base_z::EvWaypoint106` inherits from `boost::statechart::event`.

cl\_move\_base\_z::EvWaypoint106  
< TSource, TOrthogonal >

+ waypointIndex
