

cl_nitrosz::CpCostmapSwitch
::disable

cl_nitrosz::CpCostmapSwitch
::enable

cl_nitrosz::CpCostmapSwitch
::onInitialize

cl_nitrosz::CpCostmapSwitch
::getStandardCostmapName

```
graph LR; A[cl_nitrosz::CpCostmapSwitch::disable] --> D[cl_nitrosz::CpCostmapSwitch::getStandardCostmapName]; B[cl_nitrosz::CpCostmapSwitch::enable] --> D; C[cl_nitrosz::CpCostmapSwitch::onInitialize] --> D;
```

The diagram illustrates a dependency or call relationship. Three source boxes on the left, each containing a function name (cl_nitrosz::CpCostmapSwitch::disable, cl_nitrosz::CpCostmapSwitch::enable, and cl_nitrosz::CpCostmapSwitch::onInitialize), have blue arrows pointing to a single target box on the right. The target box contains the function name cl_nitrosz::CpCostmapSwitch::getStandardCostmapName. The target box is shaded gray, while the source boxes are white with black borders.
