

boost::statechart::  
event< EvAllGo< TSource,  
EmptyObjectTag > >

```
classDiagram
    class BoostEvent["boost::statechart::event< EvAllGo< TSource, EmptyObjectTag > >"]
    class SmaccEvent["smacc2::state_reactors::EvAllGo< TSource, TObjectTag >"]
    SmaccEvent --|> BoostEvent
```

The diagram illustrates an inheritance relationship between two C++ event types. The base class, `boost::statechart::event< EvAllGo< TSource, EmptyObjectTag > >`, is shown in a white box at the top. The derived class, `smacc2::state_reactors::EvAllGo< TSource, TObjectTag >`, is shown in a grey box at the bottom. A blue arrow with an open triangular head points from the derived class to the base class, indicating that `smacc2::state_reactors::EvAllGo` inherits from `boost::statechart::event`.

smacc2::state\_reactors  
::EvAllGo< TSource, TObjectTag >
