

cl_nav2z::CbAbsoluteRotate
::onEntry

cl_nav2z::CbRotate
::onEntry

cl_nav2z::PlannerSwitcher
::setPureSpinningPlanner

```
graph LR; A[cl_nav2z::CbAbsoluteRotate::onEntry] --> C[cl_nav2z::PlannerSwitcher::setPureSpinningPlanner]; B[cl_nav2z::CbRotate::onEntry] --> C;
```

The diagram illustrates a control flow where two callback functions, `cl_nav2z::CbAbsoluteRotate::onEntry` and `cl_nav2z::CbRotate::onEntry`, both trigger the `cl_nav2z::PlannerSwitcher::setPureSpinningPlanner` method. The source boxes are white with black borders, while the destination box is gray with a black border. Blue arrows indicate the direction of the call.
